

# Superior quality hydromassage baths

- All Balteco acrylic baths are made of high quality sanitary acrylics
- Air regulation buttons to adjust hydromassage flow intensity of both general hydromassage systems and back massage systems
- Diverter valve to adjust the back massage intensity (ABM™)
- Unique custom designed electronic control panels
- Water level sensor for extra safety to prevent the activation of underwater halogen lighting and hydromassage pumps when the bath is empty (ESA™)
- Powerful high performance (900-1500 W) hydromassage pumps that meet all EU requirements
- Durable hydromassage piping systems
- Bath legs are adjustable to accommodate a need for leveling
- Full aluminum frame provides bath rigidity and durability
- Highest quality drain and overflow with chromed brass decorative parts
- Reinforced bath bottom structure – unorganic Polycore™ triple layer technology makes the bottom extra strong and longlasting.
- Silent air massage blower (500 W) that meets all EU requirements
- Electrical connection box for power connection

- Air regulating buttons for adjusting the hydro-massage flow intensity by mixing the air and water.
- High-volume water inlet suction covers ensure safe water pull.
- Original and patented design EVO, EVO+, EasyTouch control panels are easy to use by slight finger touch. Balteco does not use cheap and unreliable pneumatics!
- Only manufacturer in Northern Europe to offer **chromed brass covers for underwater jets**. Balteco does not use plastic covers that are remarkably less resistant for scratches.
- All baths are produced under strict quality procedures of **ISO9001** and are **CE-approved** by quality and safety testing partner **SEMKO (Sweden)**.
- Unique bright 4 LED-lamp chromotherapy lighting system or **AmbiLight** that can be used also in empty bath.
- Adjustable back massage (ABM™) allows to adjust the intensity for the most needed massage area of human body. ABM™ makes Balteco baths the most intelligent backmassage system on the market today!
